1. After use, remove the BabyMask from the Zerostat-V Spacer.

2. For subsequent use reassemble the Zerostat-V Spacer and attach the BabyMask as given in the instructions.

3. It is required to change the BabyMask after six months of continuous use.

Washing Instructions

1. Rinse the BabyMask and the two halves of the Zerostat-V Spacer in warm water. A mild detergent or a solution of the type used to clean babies’ feeding bottles may be added to the water. Then rinse thoroughly with clean water.

2. Shake well to remove excess water. Leave to dry without the use of heat.

3. Please ensure that the BabyMask and Zerostat-V Spacer are completely dry before reusing. Do not push any cleaning cloth or instrument into the mouthpiece as this may damage the Zerostat-V Spacer.

4. BabyMask should be cleaned regularly, preferably twice a week.

IMPORTANT: Use the BabyMask as directed, unless instructed to do otherwise by your doctor.
About the BabyMask

The BabyMask is designed to make administration of the medication through the metered dose inhaler and Zerostat-V Spacer easier to infants and children. BabyMask helps your child obtain full benefit of the medicine released by the Inhaler into the Zerostat-V Spacer. With the help of the BabyMask, a child can easily inhale the medicine, while breathing in and out through the mouth normally. The shape of the new BabyMask provides a comfortable snug fit over the infant's face. The exhalation vent provides an outlet for the exhaled air and makes breathing easier.

How to use the BabyMask with Zerostat-V Spacer

1. Assemble the Zerostat-V Spacer, remove the dust cap and fill the BabyMask onto the mouthpiece of the Zerostat-V Spacer. Visually check that the assembled Zerostat-V Spacer with the BabyMask is clean.

2. Remove the protective cap from the inhaler and check that the mouthpiece is clean.

3. Shake the inhaler well.

4. Insert the inhaler into the opposite end of the Zerostat-V Spacer. The Zerostat-V Spacer with BabyMask is now ready for use.

5. Sit or lay the child on your lap and hold the BabyMask firmly over the mouth and nose with the Zerostat-V Spacer and inhaler upright as shown, ensuring that the exhalation vent fits over the nose.

6. Press the canister to release a dose of medicine into the Zerostat-V Spacer. Hold the BabyMask in place for 30 seconds while the child breathes normally.

7. If a second dose is required, wait for at least one minute. Remove the inhaler and shake it well. Then repeat steps 4 to 6.

NOTE: The BabyMask can be used with Zerostat Spacer following the same steps outlined above.
